publicloud – Managed Network

Uncompromising. Available. Connected. **With the Managed Network services, publicloud offers powerful network components. This also includes services for mobile devices that connect over Wireless LAN.**

publicloud offers a wide selection of managed switches for you to utilize for your locality. From the simple access switch to the abundant 10GbE Core Switch installations, many scenarios are possible. The publicloud Managed Network Service consists of the listed variants below.

publicloud manages and supervises all Managed Network components 24/7. The publicloud Network Service includes the operation and support of the deployed components. Based on the large selection of services that publicloud offers, we can cover a wide range of client needs.

publicloud exclusively deploys network components from the best manufacturers that have stood the test of time and provide powerful solutions. Especially noteworthy are the network components by DELL and HP ProCurve.

In addition to the publicloud Managed Security Services you have access to extensive connectivity solutions for the secure and efficient connection of your devices to the publicloud data center. For all of your chosen services publicloud deals with all of the management and operational aspects.
