

publiccloud – Managed Security

Security. Reliability. Control. Hardly any other provider offers their customers a comparable security portfolio for centrally managed security solutions in the areas of access, e-mail, web, and system security.

The publiccloud Security Services overview:

publiccloud Managed Firewall

The publiccloud Managed Firewall consists of multiple configurations and has a central management, logging and reporting system. publiccloud monitors the devices 24/7 and performs regular updates and maintenance. The Managed Firewall service includes support and all associated smaller configuration changes.

publiccloud Managed E-Mail Security

In order to protect your e-mail systems, publiccloud offers an extensive e-mail security system. Our system utilizes a multi-level security filters. The publiccloud E-Mail Security scans your e-mails based on various SPAM lists, antivirus signatures, content filters and the renowned Reputation Enabled Defense (www.reputationauthority.org).

publiccloud Managed VPN

The most important aspect of your publiccloud infrastructure is your ability to access the data center. In order to connect your office to the central systems securely publiccloud offers encrypted VPN access solutions. Remote offices and employees can access the publiccloud data center easy and safety equally.

publiccloud Dedicated Security

Alternatively, all publiccloud security solutions are available as a dedicated service. Therefore, you are free to choose to run your security services by publiccloud on a dedicated and managed system in the publiccloud data center. You have the choice and control over the configuration of your services according to your needs.

We at publiccloud care about the security of your systems and offer you customized services for the protection of your publiccloud services. We do not blindly rely on the deployed systems and processes but continuously monitor and improve them. Our specialists are in a continuous process of training and education for this subject.

Why is IT security so important?

As a company, you carry the responsibility to meet the requirements defined by law regarding the security of your client's data. The data that IT systems manage is often at the core of any company therefore the loss of such data can have widespread consequences.
